

Internal software for European operations teams.

We build the systems that replace the spreadsheets — approvals, records, quoting, scheduling. Contracted through an EU entity, delivered in your afternoon.

EU

Estonian entity,
VAT registered

14–18

CET, live every
working day

6 wks

from brief to
working system

1

workflow, built
completely

What is in these seventeen slides.

SECTION 01

01

The problem

What actually breaks in a growing European business, and what it costs before anyone calls it a software problem.

Slides 3–5

SECTION 02

02

Why it stalls

Three ways companies try to fix it, and the four questions that hold up almost every supplier decision.

Slides 6–8

SECTION 03

03

Who we are

Nexarrow in four facts, what we build, how a six-week engagement runs, and the timezone that makes it work.

Slides 9–13

SECTION 04

04

Working together

How an engagement starts, what it costs, where we honestly are today, and what we would ask of you.

Slides 14–16

01

The problem nobody files as a problem.

Every company we speak to runs at least one critical process on a spreadsheet that one person understands. It works — until growth, an error, an audit or a resignation makes it everyone's problem at once.

It is called Planning_v7 _FINAL.xlsx

Forty-one tabs. Six of them nobody opens any more. It handles the approvals, or the quotes, or which lorry goes where.

It was built by someone in operations, years ago, on a Tuesday. It works. It has always worked.

41

tabs, six
now unused

versions or backups

Planning_v7_FINAL.xlsx41 tabs

	DEPOT	DRIVER	LOAD	APPROVED	STATUS
1	Rotterdam	J. Bakker	14t	M.V.	Confirmed
2	Antwerp	P. Claes	9t	M.V.	Confirmed
3	Rotterdam	—	22t	??	Pending
4	Eindhoven	S. de Vries	11t	M.V.	Confirmed
5	Antwerp	—	—	—	—
6	Rotterdam	K. Jansen	17t	?	Pending
7	Ghent	—	8t	M.V.	Confirmed
8	Eindhoven	T. Mol	13t	??	Pending
9	Rotterdam	L. Smit	19t	M.V.	Confirmed

Last edited 3 days ago by someone who has since left.

The status quo in numbers.

A representative 90-person operations team running one core process manually. These are the figures a diagnostic typically surfaces in the first week.

Indicative figures from a manual approvals process at this scale. The point is not the precise numbers — it is that they are measurable, and almost nobody has measured them.

02

Why the fix takes so much longer than it should.

There are three ways to solve it and each one sticks. And when a company does find a supplier, the deal usually stalls somewhere that has nothing to do with price or technology.

Three doors, and each one sticks.

DOOR ONE

01

Build it in-house

Requires developers. Hiring one in Western Europe takes four to six months and a salary nobody budgeted for — and one developer cannot maintain a system alone either.

Sticks because

the cost and the wait are both bigger than the problem felt.

DOOR TWO

02

Buy something standard

Often the right answer — until you reach the part of the process that is specific to how this company competes. Then it is a 70% fit and a permanent workaround.

Sticks because

the missing 30% is usually the part that mattered.

DOOR THREE

03

Have it built

A small supplier, a fixed scope, six weeks. The obvious answer — and where most of these stories quietly stop, for a reason that surprises people.

Sticks because

of the four questions on the next slide.

It does not stall on price. It stalls in legal review.

A supplier is found, the quote is fine, the demo is good. Then finance or legal asks four ordinary questions — and the answers take three weeks to assemble, or never arrive.

Nobody is being difficult. These are simply what a European company has to establish before data leaves the building.

01

Which legal entity are we contracting with, and where?

02

How does the invoice work for our accounts team?

03

Where will our data sit, and who can reach it?

04

When are you available inside our working day?

03

We answer
all four before
anyone asks.

An Estonian company with an EU VAT number, EU hosting by default, engineers in India, and four hours of live overlap with Central Europe every working day. All of it published rather than requested.

THE FOUR ANSWERS

A small Estonian company that builds the unglamorous thing properly.

We are deliberately small, and we say so. That makes us the wrong choice for anyone who needs a large team or full-day availability — and a reasonable one for a company that wants one narrow system built well by people who answer their own email.

Estonia

Nexarrow OÜ · Reg. 17521430 · VAT EE102992676.
An EU entity you can verify in a public register in under a minute.

Reverse charge

A standard intra-EU invoice. Your finance team has processed a thousand of them.

EU region

Hosting inside the Union by default, a DPA under EU law, and a written note of who can access what, from where.

14:00–18:00

CET, every working day. Not “flexible” — a window you can book. Engineering team in India; we publish that too.

Four services. One we would rather talk about.

WHERE WE START

Internal operations software

Approvals, records, scheduling, quoting, field data, reporting. The systems that decide how fast a company can actually move.

Our best work, and the work most suppliers find too boring to want.

ALSO

SaaS product foundations

Multi-tenant architecture, dashboards, user and billing systems — the structural work that decides whether a product is still maintainable at version four.

ALSO

AI workflows, EU-hosted

Retrieval, document handling and assistants wired into real approval paths — running in the EU, with written evidence of how they behave.

ALSO

Cloud & reliability

CI/CD, environments, monitoring and release discipline — the difference between a growing product that stays operable and one that becomes fragile.

We would rather build one workflow completely than four of them to eighty per cent.

A narrow system people use daily beats a broad one that gets abandoned. It is also the only honest thing a small team can promise — and why our first engagement is usually smaller than the client expected.

Six weeks. You can open it in week two.

WEEK 01

Understand

Interviews with the people who do the work. Scope agreed in writing.

WEEK 02

You can click it

A working version on a URL. Ugly, incomplete, real.

WEEK 03

The hard part

The genuinely difficult logic. Expect awkward questions.

WEEK 04

Roles and edges

Permissions, error states, the cases nobody mentioned.

WEEK 05

Real data

Migration and testing with your actual records.

WEEK 06

Handover

Deployment, documentation, training, retirement date.

WHAT YOU GET

- Fixed scope, milestone-billed
- Code and accounts in your name from day one
- A written architecture note
- Documented handover as a deliverable

WHAT WE NEED

- One person who can decide
- Two to four hours a week from your team
- Real data, not sanitised samples
- Answers inside 48 hours

WHAT WE WILL TELL YOU

- When a request is about to get expensive
- When something went wrong that week
- When you should buy instead of build
- When we are the wrong firm for the job

Your afternoon is our evening.

Most European buyers assume a team in India means overnight replies and awkward calls. For us the opposite is true — and it is written into the contract.

4 hrs

of genuine overlap, every working day

14–18

CET — the window you can book a call in

Daily

Not weekly, not "flexible". Monday to Friday

In writing

The only availability claim we make

04

It starts small,
on purpose.

A paid five-day diagnostic first. If the honest conclusion is that you should buy something off the shelf, fix a process, or do nothing this year, we will say so — and you keep the report either way.

Three steps, and you can stop after the first.

STEP ONE

01

Operations Diagnostic

€1,900

Five working days, mostly asynchronous

- Two interviews in your afternoon
- A written map of the process
- What is worth automating, ranked
- A costed recommendation

You keep the report either way. Credited in full against a build started within 60 days.

STEP TWO

02

One workflow, built

€9.5–18k

Five to eight weeks, fixed scope

- One process, end to end
- Roles, permissions, audit trail
- Two integrations
- EU deployment and handover

STEP THREE

03

Keep it alive

€3.9k/mo

Rolling, three-month minimum

- A fixed monthly hour bank
- A named engineer
- EU-afternoon availability
- A written monthly report

OR NOT AT ALL

The diagnostic stands alone

Roughly a third of the value in a project like this is deciding correctly what to build. If the report says buy off the shelf, fix a process, or wait a year — that is a real outcome and we will put it in writing.

We would rather be the firm that told you not to spend €15,000 than the one that took it.

Where we honestly are right now.

Nexarrow is early. We would rather put that on a slide than have you find it in a reference call.

In practice you would be an early client, and you should price that in. It also means you get the founders on your project rather than whoever was available — a level of attention that stops being possible at scale.

WHAT WE CAN SHOW

- Working systems you can open and click through
- The architecture decisions behind them, written down
- A fixed scope and a date, before you commit

WHAT WE CANNOT, YET

- A long client list
- A ten-year track record
- Anyone else to blame if it goes wrong

SELECTED WORK

Replace before sending

[Project 01 — sector, size]	[result]
[Project 02]	[result]
[Project 03]	[result]

One line each: the problem as a number, what you built, how long it took, and the same number afterwards.

THE EARLY-CLIENT TRADE

For our first engagements we offer a reduced rate in exchange for a named reference and permission to write the project up. If that suits you, say so — it is a fair exchange, and we would rather make it explicit than dress a discount up as a promotion.

Send us the spreadsheet.

Genuinely — the file, or the process, or the thing that keeps needing a person to hold it together. Two conversations in your afternoon and we will tell you what it would take to fix, and whether it is worth fixing at all.

If the answer is no, that is a useful afternoon for both of us.

FIVE WORKING DAYS

€1,900, CREDITED AGAINST A BUILD

YOU KEEP THE REPORT

Email	hello@nexarrow.eu
Web	nexarrow.eu
Company	Nexarrow OÜ
Registry	17521430
VAT	EE102992676
Based	Tallinn, Estonia
Live hours	14:00–18:00 CET

Ask us the four questions from slide eight. We will answer all of them in one email, before you have to chase.
